Art Unit: 2661

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to group I, classified in class 370, subclass 466.
- II. Claim 18, drawn to group II, classified in class 370, subclass 431.
- III. Claim 19, drawn to group III, classified in class 370, subclass 437.
- IV. Claims 44-51, drawn to group IV, classified in class 370, subclass 412.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and I-IV are related as combination (I) and subcombinations (I-IV). Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombinations as claimed because group II calls for determining and posting QoS classes, group III calls for counting packets, group IV calls for storing and queuing

Art Unit: 2661

packets, and group I especially claim 1, is directed towards converting variable length packets to fixed length packets switching the fixed length packets and converting the fixed length packets to variable length packets. The subcombination II has separate utility such as counting, packets; subcombination III has separate utility such as counting packets using a second counter; and subcombination IV has separate utility such as a queuing device.

- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
 - B. Claim 22, drawn to group B, classified in class 370, subclass 231.
 - C. Claim 23, drawn to group C, classified in class 370, subclass 232.
 - D. Claim 24, drawn to group D, classified in class 370, subclass 390.
 - E. Claims 25, and 42, drawn to group E, classified in class 370, subclass 392.
 - F. Claim 26, drawn to group F, classified in class 370, subclass 352.

Art Unit: 2661

G. Claims 27 and 43, drawn to group G, classified in class 370, subclass 395.7.

- H. Claims 28-33, drawn to group H, classified in class 370, subclass 395.43.
- J. Claims 34-41, drawn to group J, classified in class 370, subclass 414.
- K. Claim 52, drawn to group K, classified in class 370, subclass 395.42.
- 4. Inventions B-K are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case,

invention B has separate utility such as a variable length packet drop control circuit which multiplies a difference between a volume of packets and a threshold and uses a register, an adder and a control circuit;

invention C has separate utility such as fixed length packet drop control circuit which outputs differences between a volume of packets and a threshold and uses a register, an adder and a control circuit. See MPEP § 806.05(d);

invention D has separate utility such as a multicast
circuit;

Art Unit: 2661

invention E has separate utility such as a switch that maps QoS classes into priority classes;

invention F has separate utility such as a switch that maps IP classes into priority classes;

invention G has separate utility such as a switch that converts IP packets into fixed length packets, maps IP classes into priority classes, and controls the reading of packets;

invention H has separate utility such as a QoS device that uses three selectors;

invention J has separate utility such as a queuing circuit (which does not convert variable to fixed length packets) with contention for outputs; and

invention K has separate utility such as a switch that maps QoS classes into high and low priority groups and selects classes.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to

Art Unit: 2661

David R Vincent whose telephone number is 703 305 4957.

The examiner can normally be reached on M-TH.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Douglas Olms can be reached on 703 305 4703. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information

Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
